The Sustainable Composite Materials & Manufacturing (SCMM) Innovation Centre, operated by LIST focuses its RDI activities on the development of low-carbon composite materials, meeting the needs of sectors like automotive, rail, space, and aeronautics.

SCMM accelerates the transition from research to industry by advancing bio-based, recyclable materials and eco-friendly processes that minimize energy use, waste, and harmful chemicals.

Demonstrators aligned with the needs of the vehicles of the future are created in collaboration with industry partners. SCMM fosters innovation by integrating stakeholders across the composite value chain, including researchers, OEMs, and suppliers, promoting rapid adoption of sustainable technologies in the real economy.
